

ROBERT CATALIN CRISAN

Data Analyst & AI Enthusiast | BSc Games Development, University of Greenwich

robert.crisan2106@gmail.com | linkedin.com/in/robertcatalincrisan | github.com/RobertGre

PERSONAL PROFILE

A driven and analytically minded BSc Games Development student at the University of Greenwich, with strong programming foundations in Python, C#, and C++. Proven ability to design and build technically complex systems — including AI modelling, simulation software, and real-time data visualisation — translates directly into a passion for data analytics and applied AI. Eager to transition these technical skills into a data and AI consultancy career through the Digital Futures Frontier AI Programme, bringing curiosity, ambition, and a commitment to delivering meaningful insight.

KEY SKILLS

- Python programming (data manipulation, scripting, logic)
- C# and C++ programming (OOP, algorithms)
- AI & machine learning concepts (trained & deployed AI systems in projects)
- Version control with Git / GitHub
- Data modelling and simulation design
- Technical documentation and project reporting
- Analytical problem-solving and systems thinking
- Fast learner with strong self-study habits

TECHNICAL PROJECTS

Fire Safety Simulation — Final Year Individual Project (COMP1970)

2025–2026

University of Greenwich | Recommended by instructor Peter Blenkarn as "sophisticated, well-considered, directly useful"

- Designed and built a full fire safety simulation in a 3D environment, demonstrating advanced AI pathfinding, real-time agent behaviour, and environment modelling
- Developed custom simulation logic to model crowd dynamics, hazard propagation, and evacuation scenarios — directly applicable to data-driven systems design
- Project praised for its technical depth and practical utility, reflecting the same qualities valued in data and AI consulting roles
- Showcased at the 2026 Greenwich Games Showcase as a standout individual project

E.R.O. — Open-World Environment Simulation

2024–2025

University of Greenwich | Unreal Engine 5

- Built a large-scale, procedurally influenced open-world project demonstrating complex systems integration including dynamic lighting, NPC logic, and environmental data management
- Managed significant technical scope independently, honing skills in structured problem-solving and iterative development

Echoes of the Twin Tombs — Multiplayer Co-op VR Adventure

2024

University of Greenwich | Unreal Engine / VR

- Collaborated in a team to develop a VR co-operative puzzle-adventure game, managing networked state synchronisation and shared game logic
- Gained experience working in cross-functional teams under time constraints, mirroring agile consultancy project environments

Echo: Bound by Choice — Narrative Puzzle Game

2023–2024

University of Greenwich | Unity / C#

- Designed branching narrative logic and player decision systems, requiring structured data modelling of states, outcomes, and conditional flows
- Applied object-oriented programming principles and state management — skills directly transferable to data pipeline and analytical tool development

Custom Shader Programming — Technical Art Project

2024

- Developed custom HLSL shaders for real-time visual effects, applying mathematical and algorithmic thinking to graphical data transformation

EDUCATION

BSc (Hons) Games Development

2023 – 2026 (Expected 1st class degree)

University of Greenwich, London

- Core modules include: AI & Intelligent Systems, Mathematics for Computing, Object-Oriented Programming, Software Engineering, and Simulation Design
- Developed strong Python and C# programming skills applied across multiple graded projects
- Final year project (Fire Safety Simulation) demonstrates ability to build technically sophisticated, real-world applicable software systems

ADDITIONAL INFORMATION

Right to Work: Full right to work in the UK

Availability: Available for full-time training Monday–Friday, 9am–5pm. Willing to commute to or relocate to London and other UK deployment cities.

Portfolio: robertgre.github.io/UnivPortfolio
